

Algorithms and Programming : functions

1 What is the primary benefit of using functions in programming?

- A. Functions make code more complex.
- B. Functions create longer code.
- C. Functions make code more reusable and easier to understand.
- D. Functions introduce additional variables into the program.

2 Which of the following is a correct example of a function definition in Python?

- A. `def function():`
- B. `function()`
- C. `function = ()`
- D. `define function():`

3 Match each part of this program to its description

```
# define sum function
```

```
def sum():  
    number1 = int(input("enter a number"))  
    number2 = int(input("enter a number"))  
    return number1 + number2
```

Function definition

```
# assign the output of sum() to result variable
```

```
result = sum()
```

```
# output the result of the sum
```

```
print(result)
```

Call of a function
