

Name: _____ Date: _____

Break it Up: Distributive Property 1

The **distributive property** is a tool to make multiplication with larger numbers easier.

To use the distributive property:
Break one factor into two addends,
multiply both addends by the other
factor, and add together both products.

Break up
the bigger
number
into two
addends

$$16 \times 5$$

$$(10 + 6) \times 5$$

$$(10 \times 5) + (6 \times 5)$$

$$50 + 30 = 80$$

$$16 \times 5 = 80$$

Directions: Fill in the blanks to solve each problem below using the distributive property.

1. 8×9

$$8 \times (3 + 6)$$

$$(8 \times \underline{\quad}) + (8 \times \underline{\quad})$$

$$\underline{\quad} + \underline{\quad}$$

$$8 \times 9 = \underline{\quad}$$

2. 12×3

$$(\underline{\quad} + 2) \times 3$$

$$(\underline{\quad} \times 3) + (2 \times 3)$$

$$\underline{\quad} + \underline{\quad}$$

$$12 \times 3 = \underline{\quad}$$

3. 4×13

$$4 \times (\underline{\quad} + 3)$$

$$(4 \times \underline{\quad}) + (4 \times \underline{\quad})$$

$$\underline{\quad} + \underline{\quad}$$

$$4 \times 13 = \underline{\quad}$$

4. 14×6

$$(\underline{\quad} + 10) \times 6$$

$$(\underline{\quad} \times 6) + (\underline{\quad} \times 6)$$

$$\underline{\quad} + \underline{\quad}$$

$$14 \times 6 = \underline{\quad}$$

It's Associative!

One of the multiplication properties is *associative*, which means you can group the factors in a multiplication equation and still get the same product.

$$A \times (B \times C) = (A \times B) \times C$$

Find the missing number according to the associative property.

$$4 \times (3 \times 2) = (4 \times 3) \times \boxed{}$$

$$6 \times (2 \times 5) = (6 \times 2) \times \boxed{}$$

$$(20 \times 5) \times 11 = 20 \times (11 \times \boxed{})$$

Find the product of these numbers.

$$7 \times (2 \times 1) = \boxed{}$$

$$2 \times (7 \times 1) = \boxed{}$$

$$10 \times (3 \times 4) = 10 \times \boxed{} = \boxed{}$$

$$(10 \times 3) \times 4 = \boxed{} \times 4 = \boxed{}$$
