Recognize The Steps Of The Dip Production Process

- It enhance, elasticity, strength, durability of the rubber product — **First Dipping**
- It helps to achieve the desired thickness and properties — **Demoulding**
- It ensures the latex is set and ready for the next stage — **Drying**
- The rubber items are carefully removed from the moulds. — **Partial Drying**
- Allows the latex to set slightly, so it maintains its shape. — **Composite Latex**
- Prepared by combining latex with additives Stabilizers, Curing agents, other compounds — **Re-dipping**
- Can prepared uniform and stable mixture of immiscible substances — **Vulcanizing**
- It determines the initial thickness and coverage of the latex layer on the Mold — **Centrifugal Emulsion**
