AI and Machine Learning

Start here

- ❖ In this homework, let's train a machine learning model using a dataset from the kaggle website and use that model to create a mobile app through the App lab.
- ❖ Let's create an app to calculate the rental price of houses or apartments.
- ❖ First log into your kaggle website account.
- ❖ Now click on the Datasets tab in the side bar.
- ❖ Search as rental price.

- ❖ Select the dataset as Toronto Apartment Rental Price among them.
- ❖ Click on Download and download the dataset and extract the dataset.

Toronto Apartment Rental Price

Apartment Rental price list - Toronto

Data Card Code (4) Discussion (0) Suggestions (0)

About Dataset

Context

I have collected the Toronto Apartment Rental prices from various sources in local websites.

Content

There are 7 columns in the dataset.

Bedroom - How many bedrooms available

Bathroom - How many bathrooms available

Den - Whether den is available or not

Address - Location

Usability

8.24

License

CC0: Public Domain

Expected update frequency

Quarterly

Business

Internet

- ❖ Now click on the start button in the homework and open the AI and machine learning lab.
- ❖ Click on the Upload CSV button and upload the downloaded Toronto_apartment_rentals_2018 dataset to AI and machine learning lab..

urvey data, or choose from a dataset below that you would like to use for your project.

- ❖ There are 1124 rows in that data set.
- ❖ Now click on the Continue button.
- ❖ What is done here is to measure an app to predict the rental price of apartments.
- ❖ To predict the rental price, the price column should be selected.
- ❖ But here the price column cannot be selected.

Predict
based on

Bedroom	Bathroom	Den	Address	Lat	Long	Price
2	2	0	3985 Grand Park Drive, 3985 Grand Park Dr, Mississauga, ON L5B 0H8, Canada	43.5816391	-79.648193	\$2,450.00

Price

Data Type
categorical

Column Information
168 values were found in this column. A graph is only shown when there are 5 or fewer.

Note
Categorical columns with more than 50 unique values can not be selected as the label or a feature.

- ❖ Here the price column cannot be selected because there are values in the price column with the \$ symbol. Therefore, the AI lab cannot identify the values in the price column as numbers.

- ❖ Open the dataset Toronto_apartment_rentals_2018 in Excel.
