

Let's go shopping.

Your parents just gave you \$100 for getting good grades this semester and you decide to go spend it at the mall and buy some things you need or want.

1. First you stop at McDonald's to get something to eat, and you decide to get a cheeseburger with fries and a soda, how would you ask the waiters.

\$6.99

I want a cheeseburger and fries and a soda.

Can I have a cheeseburger and fries and a soda please.

2. After you have eaten, you go to look for a backpack that you really need because the one you had is old and you find a store that has many backpacks of different styles and colors, but you really need one with dark colors and does cost no more than 30 dollars, in the end what would be the best option?

\$15

\$25

\$35

\$40

3. Later, after just looking around you find a shoe store and see a pair of shoes you've been wanting and decide to ask the price of them, how would you ask the staff how much they cost?

Excuse me, how much do these shoes cost?

Hey you, what's the price?

\$35

4. At the end, how much you spend? And, how much you saved?

You spend.

\$105.78

\$66.99

\$33.33

You saved.

\$40.90

\$33.01

\$22.22
