3. Read the text and write four past habits about Einstein according to the paragraph (4x5=20p)

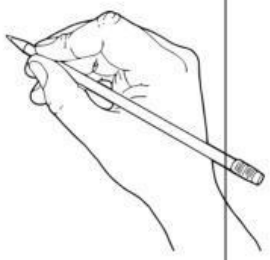

Albert Einstein, born in 1879, was a brilliant physicist known for his curiosity and deep thinking. As a young boy, he could already understand complex mathematical concepts that amazed his teachers. Although he faced challenges in some school subjects, Einstein excelled in physics and mathematics.

At just twelve years old, Einstein taught himself advanced algebra and geometry during the summer. By fifteen, he was able to master calculus, a skill that significantly contributed to his future scientific discoveries. He also demonstrated his profound analytical skills by solving puzzles and equations that were much beyond his age level.

In 1905, Einstein published papers that revolutionized the understanding of physics, including his theory of relativity. These achievements underscored his remarkable abilities in scientific thinking and problem-solving.
