

Technology is advancing so fast that by the year 2050, who knows what new technologies we **1** (invent). It is quite likely that by 2050, we **2** (use up) most of the earth's natural resources and so we **3** (rely) on wind and solar power. As there will be a shortage of energy, it is quite likely that at that time scientists **4** (try) to find a way for us to live outside the earth. Before the end of the next century, it's possible that people **5** (live) in cities on the Moon or perhaps in cities on the seabed. By 2050, it's possible that scientists **6** (already/discover) how to cure diseases such as cancer and, due to the advancement of genetic engineering, maybe hereditary diseases passed down from generation to generation **7** (disappear) forever. It is quite possible that by 2050 life expectancy **8** (increase) to 100 and that we **9** (enjoy) a healthier existence. Another area likely to have been affected by technology in the year 2050 is education. Many students **10** (study) online from their homes.
