

Adding Fractions with Different Denominators

Solve the following.

$$\textcircled{1} \quad \frac{2}{5} + \frac{1}{6} =$$

$$\textcircled{6} \quad \frac{2}{3} + \frac{4}{9} =$$

$$\textcircled{2} \quad \frac{1}{4} + \frac{2}{3} =$$

$$\textcircled{7} \quad \frac{3}{4} + \frac{7}{8} =$$

$$\textcircled{3} \quad \frac{2}{5} + \frac{1}{4} =$$

$$\textcircled{8} \quad \frac{4}{6} + \frac{1}{4} =$$

$$\textcircled{4} \quad \frac{5}{7} + \frac{2}{8} =$$

$$\textcircled{9} \quad \frac{1}{6} + \frac{3}{5} =$$

$$\textcircled{5} \quad \frac{4}{9} + \frac{1}{3} =$$

$$\textcircled{10} \quad \frac{2}{9} + \frac{3}{6} =$$
