

Mission 3 – Should we colonize Mars?

The idea of colonizing Mars has long intrigued scientists and the general public. Proponents argue that moving to Mars could protect humanity if Earth's resources are exhausted. They claim Mars offers valuable minerals and could become a second home for future generations. Opponents, however, raise concerns about the ethical and environmental implications. They suggest that humans should focus on protecting Earth rather than risking unknown consequences by altering Mars. They also point out the enormous cost of such projects and question if these funds could be better spent on solving problems here.

Activity 1

Read the text and find 3 facts and 3 opinion additional to the ones given.

Fact	Opinion
Colonizing Mars has intrigued scientists and the general public.	Moving to Mars could protect humanity if Earth's resources are exhausted.

Mission 3 – Should we colonize Mars?

The idea of colonizing Mars has long intrigued scientists and the general public. Proponents argue that moving to Mars could protect humanity if Earth's resources are exhausted. They claim Mars offers valuable minerals and could become a second home for future generations. Opponents, however, raise concerns about the ethical and environmental implications. They suggest that humans should focus on protecting Earth rather than risking unknown consequences by altering Mars. They also point out the enormous cost of such projects and question if these funds could be better spent on solving problems here.

Activity 2

From the whole paragraph identify the main idea. Then write the supporting details from that idea.
