SPACE FOOD

JOIN THE NAME WITH ITS MEANING (UNE EL SIGNIFICADO CON LA PALABRA EN INGLÉS).

Astronauts have breakfast, lunch, and dinner every day when they are in space, and they can also eat **snacks** if they feel hungry.

They eat similar food to what we eat on Earth. The difference is that space scientists put the food in small packages to preserve it. Also, they **dehydrate** drinks and keep them in **powder** form in special packages. It is more difficult to eat food in space because there is no gravity and the **crumbs** or small pieces of food can **float** away.
