Although playing video games is one of the most popular leisure activities in the world, research into its effects on players, **(18)** _____, is often trivialised.

One innovative application of video games in health care is **(19)** _____. The degree of attention needed to play such a game can distract the player from the sensation of pain, a strategy that has been reported and evaluated among paediatric patients. **(20)** _____ a form of physiotherapy or occupational therapy in many different groups of people. Such games focus attention away from potential discomfort and, unlike more traditional therapeutic activities, they do not rely on passive movements and sometimes painful manipulation of the limbs.

However, there has been no long term follow-up and no robust randomised controlled trials of such interventions. **(21)** _____. Furthermore, it is not known whether any distracting effect depends simply on concentrating on an interactive task or whether the content of games is also an important factor as there have been no controlled trials **(22)** _____. Further research should examine factors within games such as novelty, users' preferences, and relative levels of challenge and should compare video games with other potentially distracting activities.

On balance, given that video game playing is highly prevalent among children and adolescents in industrialised countries, **(23)** _____ moderate frequency of play has serious acute adverse effects from moderate play. Adverse effects, when they occur, tend to be relatively minor and temporary, resolving spontaneously with decreased frequency of play. More evidence is needed on excessive play and on defining what constitutes excess in the first place. There should also be long term studies of the course of video game addiction.
