

## NUCLEIC ACIDS

**Match the first half of the sentences with the second half.**

Two examples of nucleic acids are

All living things have nucleic acids,  
so when you eat them you also consume

We find the DNA in the

Nucleic acids contain genetic  
information that gives

The information contained  
in nucleic acids is used for

The building blocks (monomers)  
that made nucleic acids are called

The four organic biomolecules are:

Monomers: the substances  
that we obtain with food...

carbohydrates, lipids, proteins and  
nucleic acids.  
the structure and functions of our body.

their DNA.

DNA and RNA.

are made of very small parts which we  
call monomers, they are like building  
blocks.

instructions for the activities of our cells.

nucleus of cells.

nucleotide
