## STRESS

Stress refers to a feeling of panic. It means pressure or tension. It is one of the most common causes of health problems in modern life. Too much stress results in physical, emotional, and mental health problems.

There are numerous physical effects and symptoms of stress. Stress can affect the heart. It can increase the pulse rate, make the heart miss beats, and can cause high blood pressure. Stress can affect the respiratory system. It can cause a person to breathe too fast. Stress can affect the stomach. It can cause stomachache and problems digesting food.

Emotions are also easily affected by stress. People suffering from stress often feel anxious. They feel tired all the time. When people are under stress, For example, a father under a lot of stress at work may yell at a child for dropping a glass of juice. Stress can make people angry, moody, or nervous. it can lead to a variety of serious mental illnesses. Depression, an extreme feeling of sadness and hopelessness,

It is obvious that stress is a serious problem. It affects the emotions and result in mental illness. Stress has a great influence on the health and well-being of our bodies, our feelings, and our minds.
