

Essay

Hello, my name is Mr. Manaswee Anantiyo, but my friends call me Gas. I am 22 years old, and I have always been passionate about learning and teaching. I graduated with a degree from the Faculty of Science, majoring in Biological Science under the Biology program at Prince of Songkla University, Hat Yai Campus. Currently, I am furthering my education by pursuing a Master's degree in Curriculum and Instruction (Professional Teaching Plan) at the Faculty of Education, Thaksin University, Songkhla Campus. Education has always been a core part of my identity, and I am committed to advancing my knowledge and skills to make meaningful contributions to the field. Currently, I work as a teacher at Phonwitthaya School, which operates a bilingual program. I primarily teach Science and Biology, subjects that I am deeply passionate about. Teaching these subjects allows me to share the wonders of life sciences with my students and inspire them to see the world in a new light. In addition to my teaching responsibilities, I am also actively involved in the academic affairs department. This role requires me to oversee curriculum planning, improve teaching methodologies, and ensure the academic quality of our program. Balancing these two roles has enriched my professional experience and taught me the importance of teamwork and leadership in education. Looking towards the future, I have a clear vision of where I want my career to go.

I aspire to pursue a doctoral degree in Curriculum and Instruction to deepen my understanding of teaching strategies and curriculum development. My ultimate dream is to become a university lecturer or secure a position as a civil servant in the education sector. Both paths would allow me to contribute to shaping the next generation of educators and students. I believe that by continuing to grow as a professional, I can make a significant impact on the education system and inspire others to value learning. Outside of my professional life, I enjoy a variety of hobbies that keep me grounded and motivated. I love reading biology books, as they help me stay updated and expand my knowledge in the field. Music is another passion of mine, as it provides relaxation and sparks creativity. Playing football is a favorite pastime, offering both physical exercise and an opportunity to build camaraderie with others. My inspiration to become a teacher stems from a heartfelt desire to make a difference in people's lives. I want to transform individuals who lack confidence or knowledge into capable, confident learners who can contribute positively to society. For me, teaching is not just a profession; it is a mission to create a brighter future through education. In summary, my journey as an educator is driven by a deep passion for knowledge and the belief that education is the key to unlocking potential. I am committed to continuous

learning and striving to help others reach their full potential, creating a positive and lasting impact on the world.
