

Science 6

4-2

I. Arrange the steps in Water Cycle in order by writing 1-5.

_____ Molecules of water turn from gas to liquid creating our clouds.

_____ Heat from the sun changes water from liquid to vapor (gas).

_____ When the drops become heavy, they fall to the earth as rain.

_____ As the air cools, tiny droplets of water make up clouds grow bigger.

_____ When the air cools, the molecules of water vapor come closer together.

II. Choose **true** if the statement is correct, **false** if it is not.

_____ 1. Atmosphere is the air that covers the earth.

_____ 2. Deserts and mountains represent the hydrosphere.

_____ 3. Water cycle involves the movement of soil and particles within the earth.

_____ 4. Water cycle is a never-ending process.

_____ 5. Precipitation could be in the form of rain, snow, hail, or sleet.
