

LANDSLIDE

NAME: _____

Read and rearrange the phrases to complete the statements below.

LANDSLIDE

Do you know what is a landslide? A landslide is a mass movement of rock, debris or earth down a slope due to gravity. How does it happen? It happens because of erosion, volcanic eruptions, heavy rain, earthquakes or human activities of the land. Landslide occurs quickly, often with little signal. Therefore, we have to stay alert and pay attention to the warning of heavy rainfalls. We should avoid river valleys and low-lying areas when escaping too.

i. mass is of a landslide A movement

rock, debris or earth down a slope due to gravity.

ii. occurs quickly, Landslide

often with light signal.

iii. heavy rainfalls pay attention to the warning of

Therefore, we have to stay alert and _____
