

ANGOLI ESPLEMENTARI

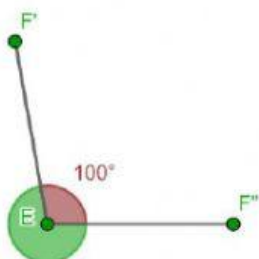

Due ANGOLI sono **ESPLEMENTARI** se la loro somma è un **ANGOLO GIRO**

SE $\alpha = 55^\circ$
 $\beta = 360^\circ - 55^\circ = 305^\circ$

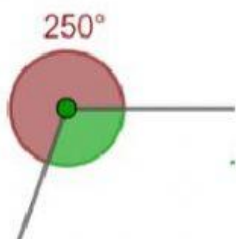

Determina l'ampiezza dell'angolo esplementare a quello dato:

SE $\alpha = 60^\circ$
 $\beta = 360^\circ - \quad^\circ = \quad^\circ$

SE $\alpha = 100^\circ$
 $\beta = \quad^\circ - \quad^\circ = \quad^\circ$

SE $\alpha = 250^\circ$
 $\beta = \quad^\circ - \quad^\circ = \quad^\circ$
