A cartoon worm with a smiling face and two antennae. Its body is divided into three segments. The first segment contains the number 6, the second contains a plus sign, and the third contains the number 1. To the right of the worm is an equals sign followed by an empty circle for the answer.

$$6 + 1 = \bigcirc$$

A cartoon worm with a smiling face and two antennae. Its body is divided into three segments. The first segment contains the number 4, the second contains a plus sign, and the third contains the number 6. To the right of the worm is an equals sign followed by an empty circle for the answer.

$$4 + 6 = \bigcirc$$

A cartoon worm with a smiling face and two antennae. Its body is divided into three segments. The first segment contains the number 2, the second contains a plus sign, and the third contains the number 6. To the right of the worm is an equals sign followed by an empty circle for the answer.

$$2 + 6 = \bigcirc$$

A cartoon worm with a smiling face and two antennae. Its body is divided into three segments. The first segment contains the number 6, the second contains a plus sign, and the third contains the number 5. To the right of the worm is an equals sign followed by an empty circle for the answer.

$$6 + 5 = \bigcirc$$

A cartoon worm with a smiling face and two antennae. Its body is divided into three segments. The first segment contains the number 5, the second contains a plus sign, and the third contains the number 5. To the right of the worm is an equals sign followed by an empty circle for the answer.

$$5 + 5 = \bigcirc$$

A cartoon worm with a smiling face and two antennae. Its body is divided into three segments. The first segment contains the number 7, the second contains a plus sign, and the third contains the number 3. To the right of the worm is an equals sign followed by an empty circle for the answer.

$$7 + 3 = \bigcirc$$

A cartoon worm with a smiling face and two antennae. Its body is divided into three segments. The first segment contains the number 3, the second contains a plus sign, and the third contains the number 6. To the right of the worm is an equals sign followed by an empty circle for the answer.

$$3 + 6 = \bigcirc$$

A cartoon worm with a smiling face and two antennae. Its body is divided into three segments. The first segment contains the number 7, the second contains a plus sign, and the third contains the number 4. To the right of the worm is an equals sign followed by an empty circle for the answer.

$$7 + 4 = \bigcirc$$

A cartoon worm with a smiling face and two antennae. Its body is divided into three segments. The first segment contains the number 5, the second contains a plus sign, and the third contains the number 7. To the right of the worm is an equals sign followed by an empty circle for the answer.

$$5 + 7 = \bigcirc$$

A cartoon worm with a smiling face and two antennae. Its body is divided into three segments. The first segment contains the number 7, the second contains a plus sign, and the third contains the number 7. To the right of the worm is an equals sign followed by an empty circle for the answer.

$$7 + 7 = \bigcirc$$

A cartoon worm with a smiling face and two antennae. Its body is divided into three segments. The first segment contains the number 6, the second contains a plus sign, and the third contains the number 7. To the right of the worm is an equals sign followed by an empty circle for the answer.

$$6 + 7 = \bigcirc$$

A cartoon worm with a smiling face and two antennae. Its body is divided into three segments. The first segment contains the number 8, the second contains a plus sign, and the third contains the number 2. To the right of the worm is an equals sign followed by an empty circle for the answer.

$$8 + 2 = \bigcirc$$
