

Space food

It is not easy to eat food in space because when there is zero gravity, the food floats away from the plate. Space scientists put the food in special packages. They dry and freeze the food and then send it to space. Some food is sticky, and it sticks to the spoon. Astronauts want to grow food in space stations in the future, but for now, each mission brings the food from Earth.

Look for the vocabulary

Gravity _____

Spoon _____

Sticky _____

Dry _____

Packages _____

Freeze _____

Float away

Brings the food

Space Station

Check the questions and answer them

Please, read about "Space food",
Before to complete these items

Is it easy to eat in the space?

Yes, it is.

No, it isn't.

What happen with the food in the space?

Where they put the food?

Write the answer (3 words)

How is the food?

Where does the food come from?

Write the answer (2 words)

In the future, what do the astronauts want?

Listen to the answer and choose the correct option

A

B
