Reading Exercise

Plastic surgery is a type of surgical specialty which is involved with both the improvement in a person's appearance and the reconstruction of facial and body tissue defects caused by illness, trauma, or birth disorders. Since 2018, this industry has been the most popular among young people. Plastic surgery restores and improves function, as well as appearance. It can involve surgery on any part of the anatomy, except the central nervous system, including: acne, crow's feet, freckles, melanoma, varicose and sutures. The two most common plastic surgery types are otoplasty and rhinoplasty in the world since the unrealistic expectations of the media industry effect on the people. Plastic surgery is more wider in Asian counties more than another countries in the world. In these countries, eyelid surgery is mostly performed to the people who are bothered with their one eyelid . These people prefer two eyelids rather than having one eyelid. Looking at the latest research, it seems that plastic surgery will maintain its popularity in the coming years.
