Complete the following sentences:

Many cities are considering how autonomous cars could change _____(1) systems. These cars drive _____(2), which may reduce _____(3) and make commutes easier. However, questions remain about their real-life operation.

A key _____(4) is establishing the right _____(5) for managing road congestion. Autonomous cars may help _____(6) traffic, but effective laws are necessary. For example, a _____(7) _____(8) would be limiting the number of cars on the road simultaneously, which can reduce _____(9) and benefit the _____(10).

Energy _____(11) is another concern. These cars require power, so we must ensure it is clean and that parts can be recycled when they age. This will support a healthy _____(12) and sustainable _____(13).

Some policies have already been _____(14) to advance this vision. However, it remains uncertain whether autonomous cars can navigate complex city layouts and unpredictable human behavior. City planners need to focus on _____(15) _____(16) solutions to address these issues.

If successful, autonomous cars could become integral to public _____(17), improving efficiency and helping maintain a healthy _____(18) for future generations.
