

Obtaining Video Summaries

Accessing Summary Content

Users can click on the 'summary' option located in the Notegpt toolbar to quickly access a synthesized version of the video's main points. This feature saves time and provides clarity on what has been covered in the video.

Regenerating Custom Prompts

If the initial summary doesn't meet your needs, Notegpt allows you to regenerate or customize the summary prompts, giving you control over the specificity and detail of the information presented.

Saving Video Summaries

Summaries generated can be saved permanently by clicking the 'save as note' button. This ensures that all condensed information is readily accessible for future reference or revision.
