

Here we have Reykjanes Peninsula which is also Reykjanes Unesco Global Geopark

Match the name of the volcanic system to the correct site.

- The Reykjanes Geopark area is a direct continuation of the Reykjanes Ridge (RR), a part of
- the Mid-Atlantic Ridge. The region is characterized by a highly varied shoreline, many lava
- flows, low-profile lava shields, crater rows, faults and fissures. Subglacial erupted tuff, breccia and pillow lava form the high-rise landscape as serrated ridges, cones and chest-shaped mountains.

Pair the correct tectonic plate on the picture
