

# Module Test 3

## Vocabulary

### 1 Problems and solutions

Choose the correct options in *italics* to complete the text.

## Say goodbye to extra weight

After visiting his doctor last year, Jeremy was advised to lose 20 kg, which was quite a **1** *challenge/threat/method* for the young man. His doctor said that his weight was a **2** *issue/priority/threat* to his overall health. Jeremy wasn't sure what **3** *method/approach/outcome* to take so he searched online and was inundated with ways to lose weight. The **4** *danger/approach/priority* was that there were so many different **5** *methods/issues/problems* of losing weight that he almost gave up. Then he noticed a flyer for a local club which promised weight-loss **6** *results/priorities/concerns* and guaranteed to refund his money if the **7** *test/outcome/threat* didn't meet his expectations. That had been a key **8** *danger/challenge/concern* for him as he was a student and couldn't afford to waste money. It turned out to be money well spent as he lost all the weight the doctor recommended.

## 7 Modal forms; degrees of certainty

Choose the correct options in *italics* to complete the text.

## Exercise your brain

Research has shown that we 1 *could/must/won't* all benefit from exercising our brains throughout our lives. In addition, good nutrition and regular exercise can improve our vascular health. Our brains need to be stimulated so that we are less likely to lose our cognitive functions. This 2 *must/will/can* be done in several ways: experts suggest that we 3 *should/ought/need* give our brains new experiences as often as possible using every physical sense and it 4 *doesn't have to/can't/won't* be anything too difficult. For example, you 5 *can/will/have to* try doing normal daily actions like brushing your teeth with your non-dominant hand or change your daily routine because this helps to activate areas of the brain where activity seems to decline when you do something automatically. One strange exercise suggested is to pick up an ordinary object, like a wooden spoon, for which you 6 *will/must/would* find ten alternative things it 7 *might/would/should* be used for. Unfortunately, there is other research which totally contradicts this. A recent study concluded that, apparently, playing cognitive games 8 *will/need/may* not be a particularly effective way of improving brain function. Whether the latter research is any more accurate than the former, who knows? One thing is for sure, if the brain is anything like other muscles in our bodies, it needs to be used regularly to keep it in shape.
