This is the weather forecast for what city? _____

Every weather forecast has 3 parts: **temperature**, **precipitation**, and **wind**.

temperature = how hot or cold it is, measured in **degrees**

What is the high temperature for Friday? ____ Is that hot or cold? _____

What's the low temperature for Thursday (today)? ____ Is that hot or cold? ____

precipitation = any **water** that **falls** from the sky (rain, snow, hail, sleet)

The chance of precipitation is measured in **percent**.

The amount of precipitation (how much) is measured in **inches**.

What is the chance (probability) of precipitation for today? ____ Look at the temperature. Would any precipitation today be rain or snow? _____

humidity = how much **water hangs** (stays) in the air, measured in **percent**.

What's the humidity today? ____ How would that much humidity feel? _____

the wind = how fast the air moves, measured in **miles per hour (mph)**

How fast is the wind today? ____ Will the wind be a problem for airplanes? ____

Draw lines from each word → definition → tool that measures it → measuring unit.

temperature

how hot or cold

inches

wind

how much water falls

miles per hour

precipitation
