AMD Indicator at a Glance

The **"AMD"** indicator enables traders to focus on specific parts of the trading day by identifying and analyzing market behavior across different **sessions**. The **Accumulation** phase represents buyer entry and asset accumulation, with buying pressure outweighing selling pressure.

The **Distribution** phase indicates increased selling pressure and asset distribution. Naturally, the **Manipulation** phase reflects the shift from accumulation to distribution.

LIVEWORKSHEETS

AMD Indicator in an Uptrend

According to the **USD/CAD** price chart in a 15-minute timeframe, a trend **reversal** favoring price growth is observable.The**accumulation** and **distribution zones** highlight the **strength** of a trend.

Entry and exit points for trades can be identified by **observing** trend weaknesses in these zones, which often precede significant movements.

AMD Indicator Performance in an Uptrend

AMD Indicator in a Downtrend

According to the **NZD/USD** chart on a 1-hour timeframe, weaknesses in the **distribution** and **accumulation** zones are visible.These weaknesses suggest a trend change after the **distribution** phase concludes.

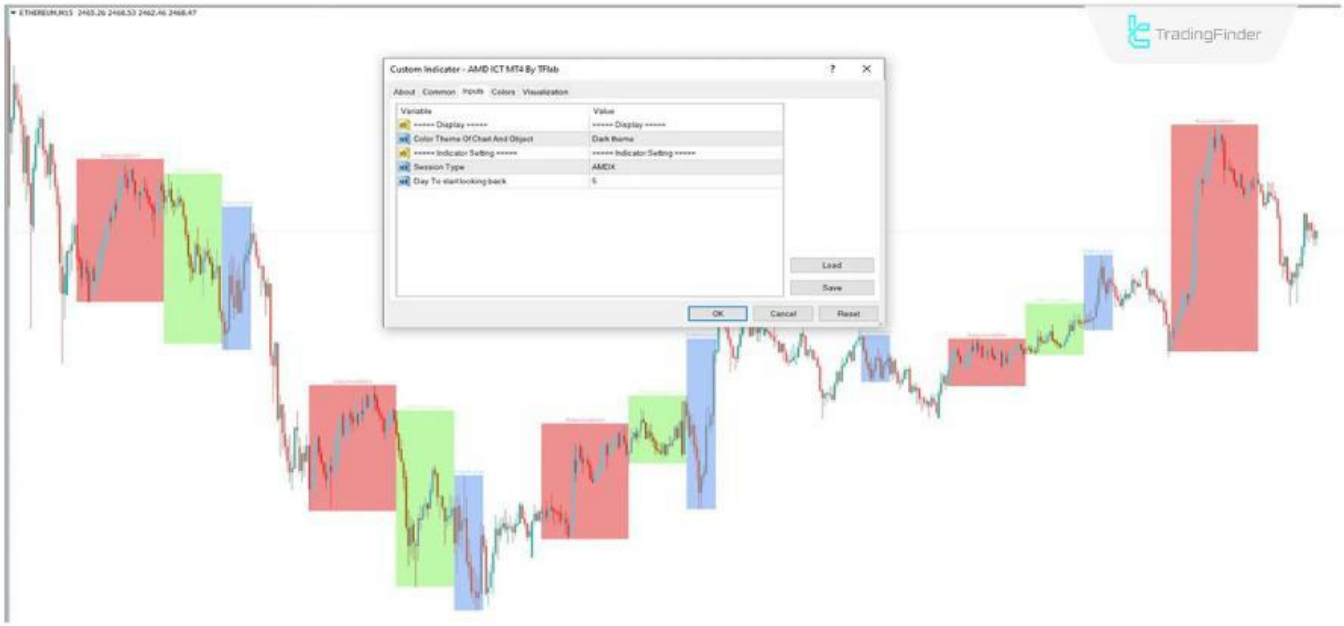

LIVEWORKSHEETS

Consequently, traders can identify appropriate **short trade positions**.The**"AMD"** indicator zones are defined based on **session** highs and lows.
