Overview

The **Cup and Handle Indicator** identifies one of the most widely used and frequent patterns on price charts, providing potential entry and exit points. It is also beneficial for optimizing risk management and trading in line with solid trends in various markets. To select the best patterns of this indicator, you can trade **U-shaped** patterns and avoid trading **V-shaped** patterns due to higher risk.

Buy Signal Conditions

The chart below shows the price of Gold to US Dollar **(XAUUSD)** in a 1-hour timeframe. The **Cup and Handle** pattern usually forms an uptrend, indicating the continuation of this trend. During the cup formation stage, the price declines and then gradually rises, creating a shape similar to a cup. After the cup is formed, the price experiences a slight decline that forms the handle. After forming the handle, one should wait for the cost to break the **resistance level** (the upper line of the handle). For confirmation, this breakout must be accompanied by increased trading volume. Once the breakout is confirmed, you can enter a **buy trade**. The entry point is usually at the handle's breakout level.

Take Profit and Stop Loss for the Cup and Handle Pattern

To manage risk, you can place your stop loss slightly below the lowest point of the handle. To determine the take profit, you can calculate the distance between the cup's lowest point and the handle's resistance level (the cup's depth) and add this distance to the breakout level.
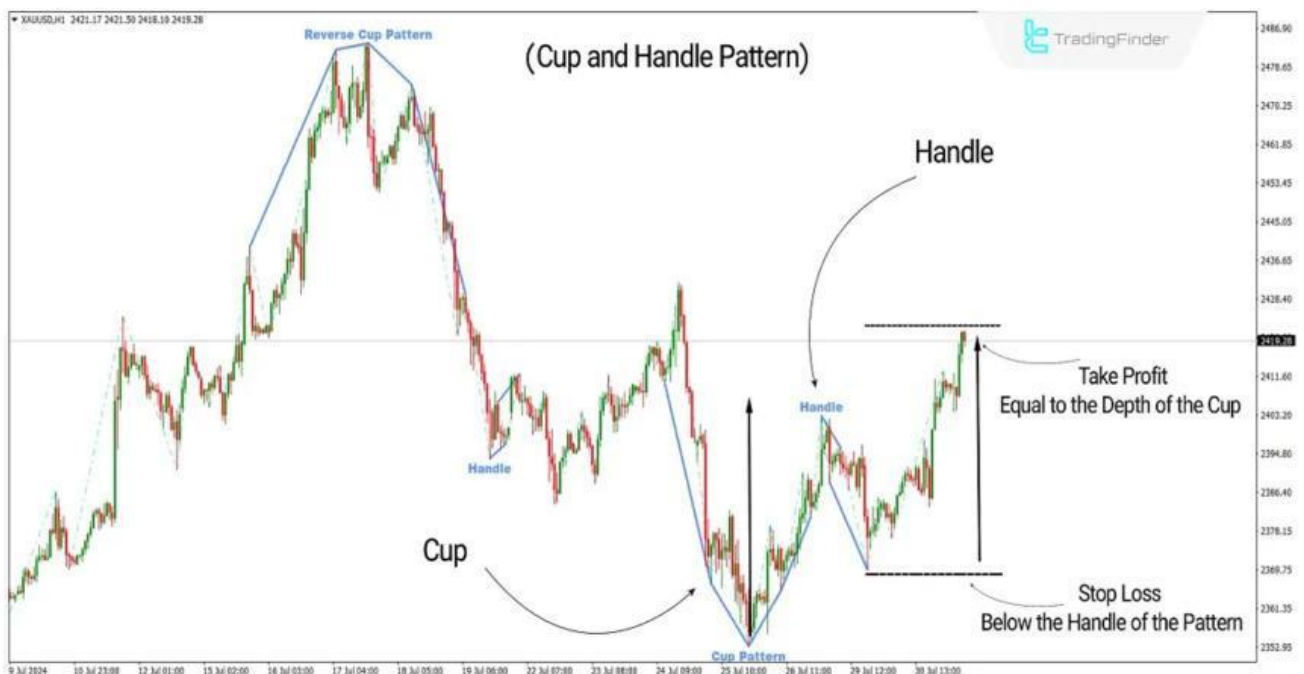

Buy Signal Conditions for Cup and Handle Indicator

Sell Signal Conditions

The chart below shows the currency pair of Australian Dollar to US Dollar **(AUDUSD)** in a 5-minute timeframe. The **Reversal Cup and Handle** pattern usually form a downtrend, indicating the continuation of this trend. During the cup formation stage, the price rises and gradually declines, creating a similar shape. After the cup is formed, the price experiences a slight increase that forms the handle. After forming the handle, one should wait for the cost to break the **support level** (the lower line of the handle). For confirmation, this breakout must be accompanied by increased trading volume. Once the breakout is confirmed, you can enter a **sell trade**. The entry point is usually at the handle's breakout level.

Take Profit and Stop Loss for the Reversal Cup and Handle Pattern

To manage risk, you can place your stop loss slightly above the highest point of the handle. To determine the take profit, you can calculate the distance between the cup's highest point and the handle's support level (the cup's depth) and add this distance to the breakout level.
