Fibonacci Retracement Assistant Indicator for MT4 Download - Free - [TFlab]

The **Fibonacci Retracement Assistant Indicator** is one of the **MetaTrader 4 indicators**. Fibonacci is one of the most widely used tools in technical analysis that helps traders identify key price **reversal points**.

This tool uses Fibonacci ratios to determine potential **support** and **resistance levels** based on the previous price movement. To use this indicator, you first must select two points on the price chart: a high point **(High)** and a low point **(Low)**.

The indicator will then draw lines at Fibonacci ratios between these two points. These lines act as **support** and **resistance** levels where the price may reverse.

Indicator Table

Indicator Category	Trading Assist - Levels
Platforms	MetaTrader 4
Trading Skills	Intermediate
Indicator Types	Reversal - Entry Exit
Timeframe	Multi Timeframe

Trading Instruments	All Markets

The image below shows a chart of the **EUR/USD** currency pair in a 5-minute timeframe. On the left side of the image, an **upward** move (AB) has occurred, with its retracement (BC) reaching the **61.8%** Fibonacci level and showing a bullish reaction.

Thus, the **Fibonacci retracement** level has effectively acted as **support**. Additionally, on the right side of the image, a downward move (AB) has occurred, with its retracement (BC) reaching the **78.6%** level and showing a **bearish reaction**. Therefore, the **Fibonacci** level acted as **resistance** in this case.
Bullish and Bearish Fibonacci Retracement in the Indicator

Overview

The **Fibonacci Retracement Assistant Indicator** is a powerful tool in **Technical Analysis** that can help traders identify **Reversal** points and critical **Support** and **Resistance** levels. However, it can be combined with other technical analysis tools, such as trend lines, to optimize its use.

Bullish Fibonacci Conditions (Buy Position)

The image below shows the price chart of **gold (XAUUSD)** in a one-hour timeframe. The **retracement** (BC) has reached the **61.8%** Fibonacci level and coincides with an upward trend line **(Bullish Trend line)**. In this scenario, the 61.8% Fibonacci level has acted as **support**, creating a favorable opportunity to enter a buy trade. Top of FormBottom of Form
