Chaikin Money Flow (CMF) Indicator for Meta Trader 4 Download - Free - [Trading Finder]

Marc Chaikin created the **Chaikin Money Flow (CMF)** indicator to measure money flow over a specified period. The **CMF** oscillator fluctuates between values **of -1** to **+1** and helps traders identify changes in money flow momentum. The CMF oscillator can detect **reversal** points and divergence by focusing on trading **volume**. The CMF **MT4 Oscillator** is available on the Meta Trader 4 (MT4) platform and is set to a default period of 20.

Bullish Trend

Daily Chart of EUR/USD (Euro/US Dollar)

The increasing **money flow** indicates a positive trend in the daily chart of **EUR/USD**. The indicator's upward movement and position above the 0 level suggest an increase in money flow and demand for the currency pair. This typically signals a **bullish** sentiment in the market, where more investors are **buying** the Euro against the US Dollar.

LIVEWORKSHEETS

Bearish Trend

1-Hour Chart of XAU/USD (Gold/US Dollar)

In the **1-hour** chart of **XAU/USD**, as the market **liquidity** decreases, the **CMF** (Chaikin Money Flow) oscillator moves below the 0 level. This decline in **liquidity** is accompanied by a downward price movement in the market, indicating that the decrease in money flow is leading to a **bearish** trend. This suggests that selling pressure is increasing, and the price of gold is dropping.

Indicator Setting

Daily Chart of WTI (West Texas Intermediate) Crude Oil

Summary

The **Chaikin Money Flow (CMF)** indicator, when moving downwards from the 0 level, **MetaTrader 4 indicates** an **(Over Sold)** condition and high **supply**. This situation is generally considered a sign of **selling** pressure. On the other hand, when the CMF indicator is above the 0 level, it can be interpreted as a **buy** signal or an indication of high demand **(Over Bought)**.
