

## RSI Divergence Indicator for MetaTrader 4 Download - Free - [TF Lab]

The **RSI Divergence indicator**, like the automatic **MACD Divergence** indicator, is an essential technical analysis tool and one of the most critical indicators for trend reversals widely used in [MetaTrader 4 indicator](#).

This indicator automatically identifies **bullish divergences** at **lows** and **bearish divergences** at **highs**. It can be used alongside other technical analysis tools, such as **support** and **resistance** levels, to obtain reliable signals.

## Indicator Table

<b>Indicator Category</b>	Oscillator - Price Action - Signal and Forecast
<b>Platforms</b>	MetaTrader 4
<b>Trading Skills</b>	Beginner
<b>Indicator Types</b>	Reversal - Overbought and Oversold
<b>Timeframe</b>	Multi Timeframe
<b>Trading Style</b>	All styles
<b>Trading Instruments</b>	All Markets

In the image below, the chart of the **EUR/USD** currency pair in a 4-hour timeframe is shown, where at the end of a **downtrend**, the last low has gone lower than the previous low (**LL**). Still, the **RSI** indicator shows a **bullish divergence (positive)**, issuing a **buy signal** and indicating a trend reversal. Similarly, after an uptrend, the last high has gone higher than the previous high (**HH**). Still, a **bearish divergence (negative)** has formed on the indicator, indicating a **sell signal** and a reversal from an **uptrend** to a **downtrend**.

Buy and Sell Signals from the RSI Divergence Indicator

## Overview

The **RSI Divergence indicator** can detect the continuation of the primary trend or a reversal. This indicator identifies divergences without needing manual chart examination, which can increase analysis accuracy and prevent human errors. Divergences are usually considered solid signals for trend changes, so incorporating them into trading strategies is highly beneficial.

## Uptrend Signals (Buy Positions)

In the image below, the **Dow Jones** Index chart with the symbol **(US30)** in a 15-minute timeframe is shown. After a retracement, we witness a weakening of power, and the indicator reaches the oversold zone. The indicator detects a positive divergence between the two lows at the end of the retracement (**Swing Low**) and issues a (**BUY**) signal on the price chart.

## Take Profit and Stop Loss for Buy Signals

The price reaching the overbought zone can be considered to set the take profit, and the stop loss can be placed near the last low.

## Downtrend Signals (Sell Positions)

In the image below, the chart of the **USD/CAD** currency pair in a 30-minute timeframe is shown.

After an **uptrend**, we see a **bearish divergence (negative)** between the **two highs** at the end of the trend. Additionally, the indicator has reached the overbought zone, and under these conditions, the **(SELL)** signal appears on the chart, indicating an entry into sell trades.

## Take Profit and Stop Loss for Sell Signals

The price reaching the oversold zone can be considered to set the take profit, and the stop loss can be placed near the last high.

## Settings of the RSI Divergence Indicator

Settings of the RSI Divergence Indicator

- ⚡ **RSI Period:** The RSI period is set to 14

## Summary

The RSI Divergence indicator is a technical analysis tool that helps identify divergence points in the Relative Strength Index (RSI). Divergences occur when the price movement and the RSI move in opposite directions. This type of **MetaTrader4 Price Action indicator** helps traders identify potential trend changes or the continuation of the existing trend.
