

Healthy environments may help prevent disease according to the WHO

Wherever you live, your health is impacted by the Around the world more than people die every year from and nearly of those deaths are directly caused by Can you imagine ? That 's deaths every hour of every day from an environment. The hardest hit are those in countries, especially in , South East and in the western And the young and old are more affected. More than live in urban areas and can face heavy , air , poor and limited access to and Many work in the informal sector under , and demeaning conditions. We all face the impact of and poisons, radiation and poor practices. And climate change means a very future. So now, we are at a crossroads. Things can continue getting or we can work together to our world. Simple can be taken immediately to protect our health and the environment. We can reduce our and clean our air by using fuels and walking or cycling more. We can store toxic substances in our homes and workplaces. We can protect our water by disposing of waste and introduce clean energy technologies. We can bring multiple government sectors to ensure all policies actively health. Let us all work together to improve our and
