

## Hull Moving Average Indicator MetaTrader 4 Download - Free - [TradingFinder]

The **Hull Moving Average (Hull MA)** indicator was designed by Alan Hull to reduce the lag in Moving Averages (MA) and increase the accuracy in trend detection. This **MT4 volatility indicator** helps traders clearly observe **short-term trends**. Traders can use this indicator to optimize **entry** and **exit** points in their trades.

## Indicator Specifications

Trading Style	Short-term - Mid-term
Trading Market	All Markets

## Buying Trades with Hull Moving Average

The **EUR/USD currency** pair chart in the 15-minute timeframe shows how the indicator performs in an **uptrend**. The first sign of an uptrend in the **Hull Moving Average indicator** is when the price crosses from below to above the **moving average**. Additionally, if the moving average turns **upward** and has a steep slope, it indicates an increase in buyer strength and the likelihood of the **uptrend** continuing.

## Selling Trades with Hull Moving Average

According to the **XAU/USD** price chart in the **1-hour timeframe**, the first sign of a downtrend in the Hull **Moving Average indicator** is when the price crosses from above to below the **moving average**. Additionally, if the moving average turns downward and has a steep slope, it indicates an increase in seller strength and the likelihood of the **downtrend** continuing.

Hull Moving Average Indicator Performance According to XAU/USD Price Chart

## Indicator Settings

Hull Moving Average Indicator Settings

- ⚡ **Period:** The default period for calculating the moving average is 13;
- ⚡ **Shift:** The drawing shift for the moving average is set to 0;
- ⚡ **MA\_Method:** The moving average calculation method is "Linear Weighted";
- ⚡ **Applied\_Price:** The data type used for the moving average calculation is "Typical Price."

## Conclusion

The best feature of the **Hull Moving Average** indicator is its speed compared to other **moving averages** when responding to price action changes. This feature eliminates the slow performance of

traditional moving averages. The **MT4 trading assist indicator** only focuses on recent **market changes** and shows the current trend status, making it suitable for smaller timeframes.
