Turtle Soup Indicator in ICT Style for MetaTrader 4 Download - Free - [TFlab]

The **Turtle Soup Indicator** for MetaTrader 4 is one of the trading patterns used in the **ICT style**. This indicator can detect **fake price breakouts (Fake Breakouts)**, and if the price conditions are suitable, it provides a signal to enter a trade in the opposite direction of the trend.

Therefore, Turtle Soup is ideal for **reversal trades**. This **MT4 liquidity indicator** is simple in appearance and divides fake breakouts into **Internal** and **External** categories.

Additionally, new highs are labeled with "HH" and new lows with "LL." Green lines are drawn by connecting these highs and lows. These green lines function similarly to a **ZigZag** pattern.
