ATR Trailing Stop (TSL) Indicator MT4 Download - Free - [TradingFinder]

The ATR Trailing Stop indicator is one of the MetaTrader 4 indicators used for trade risk **management**. This indicator creates a moving stop loss using the market's **Average True Range** (**ATR**), which automatically adjusts based on price fluctuations.

As market volatility changes, the **ATR Trailing Stop moves** the stop loss automatically in favor of traders. In an uptrend, the **stop loss** is plotted in green, and in a downtrend, it is plotted in red.

Trading Style	Swing Trading
Market	All Markets

LIVEWORKSHEETS

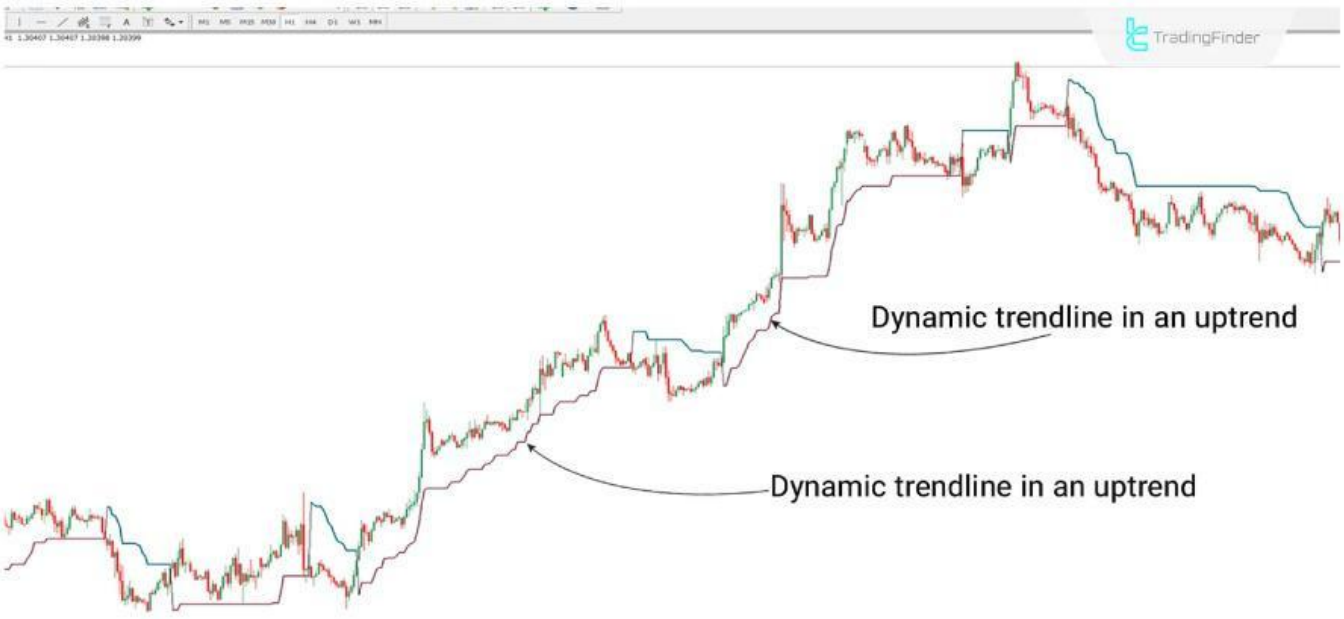

ATR TSL Indicator at a Glance

The **ATR Trailing Stop** Indicator adjusts based on market volatility using the **Average True Range (ATR)** and plots **stop losses** at critical points. When used alongside other technical analysis tools, this highly functional indicator helps **traders enter** trades with more optimized stop losses for better **market analysis**.

Uptrend Conditions

The price chart of the **GBP/USD** currency pair in the 1-hour time frame demonstrates how this indicator functions in an uptrend. As shown in the image, the market's **Average True Range (ATR)** also rises as the price increases.

This increase in ATR decreases the gap between the stop loss and the price. Additionally, the **Trailing Stop Loss (TSL)** dynamically moves upward as the price rises.

How the indicator functions in an uptrend

Downtrend Conditions

The cryptocurrency Bitcoin **(BTC)** price chart in the 4-hour time frame demonstrates how this indicator functions in a downtrend. As shown in the image, the market's Average True Range (ATR) also **drops** as the price decreases.

This drop in ATR decreases the gap between the stop loss and the price. Additionally, the **Trailing Stop Loss (TSL)** dynamically moves **downward** as the price declines.

How the indicator functions in a downtrend

Settings

The advanced options in the settings section of the ATR Trailing Stop Loss (ATR TSL) indicator are as follows:

- **Inp Period**: Input period set to 10;
- **Inp Coeff**: Input coefficient set to 4.0.
