

# Don't Close the Door on AI

AI tools have been a hot topic lately. They can provide users with information quickly and even create articles, pictures, videos, and sounds. Many students have started to use them for learning. However, education experts can't agree on whether this is a good idea.

Some experts \_\_\_\_\_ that AI tools can make learning easier and more convenient. To start with, AI tools can answer questions on any subject right away. They can also explain difficult ideas in simple words and help find mistakes in students' homework. With their help, students can learn as they \_\_\_\_\_.

On the other hand, other experts worry that students will depend too much on AI tools. They might stop thinking critically and even use the tools to cheat. What's more, because AI tools collect information from the Internet, they might give out information that isn't correct or real. For example, a lawyer in the US used an AI tool to find law \_\_\_\_\_ he was doing a study. To his surprise, he was given a fake case.

Although AI tools have their problems, they are still great for learning. It depends on how people use them. That's why there's no \_\_\_\_\_ in keeping students from them. Instead, students should be taught how to use these tools wisely.
