GERMS

What *little living things* can make you cough, sneeze, and stay in the body for days?

Germs! Germs are so small that you need a microscope to see them. They are all over the world. They spread when someone sneezes or coughs. Then, they enter our bodies and make us sick. Germs produce a toxin. This is like a poison. Some germs cause a fever. Others make us feel tired. Some cause a rash. You can protect yourself from germs by washing your hands every day. Cover your mouth when you cough. Sneeze into the crook of your arm and use a tissue. Then, wash your hands again!
