

BPR + SFP Indicator ICT in MetaTrader 5 - Free - [TradingFinder]

The **BPR + SFP** Oscillation Breakout Indicator combines the BPR and SFP **patterns in technical analysis** to identify market trends and **pinpoint** suitable **entry points**.

This combination is based on market behavior and traders' reactions to **key price levels** such as **MT5 Support and resistance indicator**, **liquidity** accumulation zones, **breakout** and **pullback levels**, and market **high**s and **low**s.

This tool **analyzes oscillation breakouts**, validates **breakouts** and **pullbacks** to specified levels (displayed with green and red arrows), and provides **entry signals** and **trend changes** for traders.

	Forward MT5 Indicators	Share Stock MT5 Indicators

Indicator Overview

The combination of oscillation **breakout** and BPR patterns in the **ICT technical analysis style** enables traders to identify **range zones**. These zones are often recognized as **key market levels**, used for making critical trading decisions. This tool assists traders in **entering** volatile markets and locating suitable **entry** and **exit points**.
