Overview of the Indicator

The Judas Indices Indicator (Judas Indices ICT) considers the range between the last swing low and high in the 15-minute time frame from 09:30 to 09:45 New York time. During this period, market makers seek liquidity hunting.

After breaking the high or low (gray arrow), the price is expected to move in the opposite direction with a character change (CHoCH) and return to order blocks or FVGs. In this case, the indicator issues an entry signal with a green arrow for buy and a red arrow for sell.

Judas Indices Indicator in an Uptrend

The **1-minute price chart of AUD/USD** is displayed. The **indicator** identifies the **price trend** after the **low break** in the **15-minute time frame** and, after **liquidity hunting** and **price increase**, issues an **entry signal** with a **green arrow** upon the **trend's return to the order block**.
