Recognizes describing words within a sentence.	

Reading 1: Green & Good – A Responsible Enterprise

Green & Good is a small, creative business that makes natural soap, shampoo bars, and body lotions. The products are all handmade by a team of kind and thoughtful workers who care about the environment. They use only fresh, natural, and safe ingredients, such as sweet-smelling lavender, soothing aloe vera, and gentle coconut oil. Nothing they use is harmful to people, animals, or the Earth.

The shop also uses recycled and biodegradable packaging. Their boxes are brown, simple, and can be reused or

composted. They do not use plastic, which helps reduce pollution. Every label is printed with eco-friendly ink, and all products are made in small batches to avoid waste.

Green & Good doesn't only sell products — they also educate. Every month, the shop hosts free workshops for families and schools. Children can learn how to make their own soap or how to take care of the planet through fun, hands-on activities. The store is always bright, cheerful, and filled with natural smells that make customers feel relaxed and happy.

The business is also part of a local program that donates part of their profits to plant trees and clean rivers. Because of their choices, Green & Good helps reduce pollution, saves water, and inspires people to consume in a more thoughtful and sustainable way. It's a perfect example of responsible production and consumption, showing that a business can care for the planet while also growing and succeeding.

Comprehension Questions – Reading 1:

What kind of products does Green & Good sell?

What kind of ingredients do they use?

What is special about their packaging?

How does Green & Good help the environment?

What kinds of workshops do they offer?

How is the store described? Find at least 3 adjectives.

What does the word "sustainable" mean in this text?

In what ways is this business responsible?

Reading 2: Plastic Power – A Problem for the Planet

Plastic Power is a very large company that sells toys in many countries. Every day, the factories produce thousands of bright, shiny, and plastic toys. These toys are usually packed in big, colorful, and plastic boxes that are thrown away immediately. Most of the packaging cannot be recycled, and it ends up in the trash, polluting the environment.

Inside the factory, things are not better. The machines use a lot of electricity, and the workers use too much clean water to cool down the machines. Thick, black smoke comes from the chimneys, and the air around the factory is often dirty and smelly. There is no recycling system in place, and the waste is simply thrown out.

The toys are usually cheap, but also fragile. They break quickly and often cannot be repaired. Children play with them for a few days and then throw them away, which creates more plastic waste. The company doesn't offer any solutions or advice about recycling or reusing toys.

Even though Plastic Power makes a lot of money, it does not take care of nature. It uses too many natural resources, creates pollution, and teaches children that it's okay to throw things away. This is an example of irresponsible production and consumption. The company cares more about profit than about the planet, and that is something we must work to change.

○ **Comprehension Questions – Reading 2:**

What products does Plastic Power make?

What kind of packaging do they use?

What are the problems with their factory?

How are the toys described? Name 3 adjectives.

Why are their toys bad for the environment?

What does the company not do that a responsible business should?

What happens to the toys after kids play with them?

In what ways is this business irresponsible?
