(4)..... are studying ways to change the energy of ocean currents, tides, and waves into electricity.

LIVEWORKSHEETS

Part 7: Read the following passage and decide if the statements that follow are TRUE or FALSE.(1,0m)

Air pollution is a cause of ill-health in human being. In a lot of countries there are laws limiting the amount of smoke which factories can produce. Although there isn't enough information on the effects of smoke in the atmosphere, doctors have proved that air pollution causes lung diseases. The gases from the exhausts of cars have also increased air pollution in most cities. The lead in petrol produces a poisonous gas which often collects in busy streets surrounded by high buildings. Children who live in areas where there is a lot of lead in the atmosphere can not think as quickly as other children and are clumsy when they use their hands. There are other long-term effects of pollution. If the gases in the atmosphere continue to increase, the earth's climate may become warmer. A lot of the ice near the Poles may melt and may cause serious floods.

1. Air pollution can make people ill.
2. Some countries pass laws to prohibit factories from producing smoke.
3. Lead should not be used in petrol because it's bad for children's brain.
4. The ice near the North and South Poles may melt because of very bad floods.

---The end ---
