

Solve the given linear equations.

Level 1: Solve $5x + \frac{7}{2} = \frac{3}{2}x$	level 2: Simplify: $5 - (3q - 1) = q - 4$
Level 3: Find the solution for $\frac{(2x+1)}{3x-1} = \frac{3}{2}$	HOTS: Find the solution for $\frac{(p-4)}{4} = \frac{(p-5)}{5} + 3$
