

What is the risk to health?  
Does it affect an individual, a  
community or the whole  
population?

1

Is the problem caused by  
individual behaviour?  
Is it influenced by society?  
Is it influenced by the natural or  
man-made environment?

2

Decide which intervention to  
make:  
An individual, community or  
population approach?  
At an educational, resources or  
policy level?
