6	longitude (n)		The town is at <b>longitude</b> 28° west.
7	(adj)	[thuộc] đêm; về đêm	Many owls are _____, hunting for prey during the dark hours.

**Exercise 3: Translate these texts into Vietnamese. (7 pts)**

1. European bee-eaters live for five to six years. The difficulties of migration and avoiding predators along the way affect every bird. Bee-eaters today also find it harder to find food, as there are fewer insects around as a result of pesticides. Breeding sites are also disappearing, as rivers are turned into concrete-walled canals.

---

2. The whale's journey was unusual not only for its length, but also because it travelled across almost 90 degrees of longitude from west to east. Typically, humpbacks move in a north-south direction between cold feeding areas and warm breeding grounds - and the longest journeys which have been recorded until now have been between breeding and feeding sites.
