

When adding and subtracting 4 digit numbers we usually round to the nearest 100.

$$\begin{array}{lll} 5673 + 3245 = & 5373 - 1435 = & 5145 + 2286 = \\ 5700 + \underline{\quad\quad} & 5400 - \underline{\quad\quad} & \underline{\quad\quad} + \underline{\quad\quad} \end{array}$$

When multiplying a 3 digit number by a 1 digit number we only round the 3 digit number to the nearest H

$$\begin{array}{ll} 467 \times 3 = & 624 \times 2 = \\ \underline{\quad\quad} \times 3 & \underline{\quad\quad} \times 2 \end{array}$$

When dividing a 4 digit number by a single digit number we round to the nearest H that is the closest multiple of the number we are dividing by.

$$\begin{array}{ll} 2159 / 5 = & 1441 / 3 = \\ 2000 / 5 & \underline{\quad\quad} / 3 \end{array}$$

$$\begin{array}{lll} 4435 + 2878 = & 6578 - 2854 = & 4435 + 4351 = \\ \underline{\quad\quad} + \underline{\quad\quad} & \underline{\quad\quad} - \underline{\quad\quad} & \underline{\quad\quad} + \underline{\quad\quad} \end{array}$$

$$\begin{array}{lll} 378 \times 4 = & 1564 / 6 = & 2 \times 6 = 12 \\ \underline{\quad\quad} \times \underline{\quad\quad} & \underline{\quad\quad} / \underline{\quad\quad} & 3 \times 6 = 18 \end{array}$$
