For questions **9–16**, read the text below and think of the word which best fits each gap. Use only **one** word in each gap. There is an example at the beginning **(0)**.

Write your answers **IN CAPITAL LETTERS** on the separate answer sheet.

The importance of reading

Reading is good **(0)** us. In fact, there is plenty of evidence that reading for pleasure is more than just another leisure pursuit – it actually improves our mental and physical health. Reading extended texts **(9)** as novels or biographies, **(10)** requires intense concentration for a considerable period of time, helps to lengthen attention spans in children and improves their ability to think clearly. However, experts say **(11)** is essential to acquire the habit of reading extensively **(12)** a small child, while the brain is still developing.

Reading can undoubtedly **(13)** beneficial to our mental well-being. Reading not **(14)** helps combat feelings of loneliness, it also allows people to relax and forget their problems for **(15)** while. The concentration required during the act of reading seems to ease muscle tension and slow the heart rate. Researchers have found that just six minutes of reading can reduce stress levels by as **(16)** as two-thirds.

Part 3

For questions **17–24**, read the text below. Use the word given in capitals at the end of some of the lines to form a word that fits in the gap **in the same line**. There is an example at the beginning **(0)**.

Write your answers **IN CAPITAL LETTERS** on the separate answer sheet.

The restaurant served diners a meal but charged some **(18)** as much as others, even though the meals were identical and taken in the same **(19)** with the same level of service. After the meal everyone was asked what they thought of the meal. One might think that the people who had paid least would be the most impressed with the meal. **(20)** though, it was those who had paid most who gave it the highest **(21)**

Mark your answers **on the separate answer sheet**.

Cycling Home from Siberia, by Robert Lilwall

We had been flying east all night and I awoke to notice that it was already daylight. Looking out of the window onto the empty landscape below, the dark shades of brown and green reassured me that, although it was mid-September, it had not yet started snowing in Siberia. I could see no sign of human life and the view rolled away in an otherworldly blend of mountains, streams and forests to an endless horizon.

My Russian neighbour Sergei woke up and smiled at me sleepily. I had told him that I was flying to the far-eastern Siberian city of Magadan with only a one-way ticket because it was my intention to return home to England by bicycle. 'But, Robert,' he had reasoned with me, 'there is no road from Magadan; you cannot ride a bicycle.' I explained that I had reason to believe that there was a road, though not many people used it these days.

'Alone?' he asked, pointing at me.

'No, I will be riding with a friend called Al.'

'Just one friend?'

'Yes just one,' I nodded. Sergei still looked unconvinced and with just one word 'Holodna' (cold) he pointed outside. I tried to bolster my case by explaining to Sergei with hand gestures that I had a lot of warm clothes, though I left out the fact that, because my trip was self-funded I was on a tight budget. Most of my clothes and equipment had been bought at slashed prices. In reality, I was not at all sure they would be up to the job. This was especially true of my enormous postman's over-trousers which I had bought for £10.

My life of travel had all started in a lecture hall in Scotland several years ago. The hall that morning was full of students slumped in their seats. Some were taking notes, without energy. The lecturer droned on. I was thinking

hard about a particular dilemma. Should I ask him or not? 'Well, why not?' I tore a fresh sheet from my pad and wrote, 'Hi Al, Do you want to cycle across the Karakorum Highway between Pakistan and China this summer? Rob.' In the row in front of me slouched Al, my old school friend. I tapped him on the shoulder and passed the note. He tried to decipher my scrawl, scratched his head, wrote something and passed it back. I unfolded it and held my breath while I read. 'OK,' it said.

Six years later I was going to join Al in Siberia. I had been working as a geography teacher and although I was still far from having full control of my classes, the job did tick many important boxes for me. It was frequently challenging, rarely boring, often fulfilling and of course there were great long holidays in which to chase adventures. Twice since I had started teaching I had used these holidays to go to meet Al. He had caught the adventuring-bug in a big way after our bike ride through Pakistan and so had decided to do something far more relaxing than teaching: to cycle around the world. I was now joining him for the Siberian part of his trip.

Ever since that first ride we had taken together, Al had been setting himself greater and greater challenges. This round-the-world-by-bike trip was certainly his greatest so far. At times he thought that the ride, or the road, would break him. Although it sounded tough, I envied him in many ways. He was having an extraordinary adventure, finding that he could deal with each new challenge even if it seemed impossible. He was proving wrong the sceptics who had told him he could not do it. He was doing something that scared him nearly every day and it made him feel alive.

Part 6

You are going to read an article about a type of seabird, called a puffin. Six sentences have been removed from the article. Choose from the sentences **A–G** the one which fits each gap (37–42). There is one extra sentence which you do not need to use.

Mark your answers **on the separate answer sheet**.

Puffins in peril

Scientist Mike Harris explains that the puffin seems about to join the list of seabirds whose numbers are declining.

It's a grey day in early April on the Isle of May off the east coast of Scotland. Far out to sea a small dot appears on the horizon. It rapidly increases in size, suddenly turning into a puffin that lands with a splash on the water. This bird probably hasn't seen land for five months, but now it's returning to its colony for the breeding season.

The first puffin is soon joined by others and together they bob on the sea. Newly returned birds are nervous but, as the days pass, they gain confidence and begin reclaiming the underground nesting burrows they made the previous year by tunnelling into the soft earth on the top of the cliffs. **37** They have to hurry because it takes three months to rear a chick and all the birds must leave by early August to spend time feeding intensively before the winter.

I visit the island every April, eager to see how many of the adult puffins we have caught and attached identification rings to have returned. **38** With a team of helpers I counted every occupied burrow on the island – something we undertake every five years.

The island's puffin population had been increasing every year for the previous 40 years, and so we anticipated at least 100,000 pairs. To our dismay we found just 42,000. **39** Experts from other research programmes have concluded it must be connected to where puffins spend the winter months.

Last spring we also caught and weighed some returning adults and found they were significantly lighter than the birds we caught 10 years ago. **40** Puffins are long-lived and can cope with a few poor productive seasons, but not with such a large loss of adults.

In early August, the puffin colonies empty rather abruptly. Virtually all puffins leave within a week, though a few adults remain to feed a late chick. **41** I have always believed, though, that few of them venture far from the North Sea. Now, however, the development of instruments known as geolocators, small enough to be fitted around a puffin's leg, is enabling us to test this idea.

We fitted these units to some puffins two years ago and caught the birds again last year to download the data. Some did remain within the North Sea, but others went much further. For someone who has spent years watching puffins for only part of their lives, this new technology is providing some fascinating information. **42** This would still leave us with the question of what they eat in winter and whether there are sufficient quantities of prey available.

The good news is that we now have an idea of the areas our puffins go to in winter, and we can check whether conditions there might have altered due to climate change or overfishing. Maybe we can then take some steps to help them. Hopefully it is just a local problem, because there are in fact still plenty of puffins to see around the Scottish coast.

Canaletto and Venice

An expert describes the close relationship between the great 18th century Italian painter Canaletto and his home city.

- A** Canaletto's lifetime subject was the city of Venice. Apart from the works done during his decade in London, he painted virtually nothing else, and Venice has never been so minutely and extensively painted by any other artist. His response to Venice was not like the dramatic, emotional response of a visitor overpowered by the city's haunting beauty and magic, as the British painter Turner was later, for example. Canaletto's paintings, with their love of incidental detail, betray a deeper-rooted, more lasting attachment – the affection of a native Venetian.
- B** Canaletto depicted the city as it really was, documenting the changes in the cityscape over the years – Piazza San Marco being repaved, palaces being reconstructed, graffiti appearing and disappearing. Above all, he suffused his painting with the natural light and atmosphere of Venice which was second nature to him. When he went to London in 1746, Canaletto could not quite come to terms with painting the cooler tones and the unsympathetic climate of England, and somehow his paintings of the River Thames always ended up looking rather like the Grand Canal.
- C** In spite of his natural affection for Venice, Canaletto's paintings were rarely bought by his fellow Venetians. This was probably because the locals did not need reminders of their city, and also because in Venice 'view painting' was not taken very seriously in comparison with historical and religious painting, or even landscape and figure painting. To become a 'view painter' at that time was quite a brave choice and, by the end of his career, Canaletto had done much to raise the status of the genre. However, his influence was felt more among painters in England, the home of his major patrons.
- D** Canaletto's extraordinarily detailed and accurate scenes were perfect for the foreign tourists in Venice, who wanted souvenirs or mementoes of their visits. The more accurate the scene the better, in fact, and Canaletto's first patron, Owen McSwiney, persuaded him to change from his earlier picturesque and theatrical style to a more factual one. Instead of loose brushwork and thick paint, alongside dramatic contrasts of light and shade, Canaletto adopted more of a snapshot approach, which proved to be very commercial. His colours became brighter, the paint surface smoother, and the scenes looked more realistic. McSwiney wrote 'his excellence lies in painting things which fall immediately under his eye', as if he worked directly from nature. At a casual glance, everything in his pictures is instantly recognisable and looks exactly as it does, or did, in reality. In fact, Canaletto never painted from nature – his pictures were created in the studio.
- E** In working out the compositions, he used his imagination and a certain artistic licence. Although he paid the minutest attention to the detail of a decorative carving, a ship's sails or washing hanging out, Canaletto felt at liberty to distort and reorganise the main objects in his paintings in the interest of dramatic effect. He would alter the sweeping curve of the Grand Canal, for example, or include more in a composition than could be seen from any single viewpoint. The clutter of traffic on the waterways looks random and natural, but the position of each boat was carefully worked out to achieve the best effect. In this way, he conveyed the essence of Venice even if he deceived the eye. The drawings which formed the basis of his compositions range from rapid sketches of ideas for painting, done on the spot, to large-scale fully detailed preliminary drawings. Sometimes, he made precise drawings for engravers to copy, and occasionally he produced them as works of art in their own right, in which case they were finished in the studio.
