PASSAGE 7

Tra ID Đề [5882] - Tra ID Video [5883]

When you look in the mirror, do you see your father's smile? Maybe you take after your mother or look like a grandparent? That's because of DNA. Our DNA contains genes that make each person in the world different - no two people look, think or act the same. We pass down our genes through generations. Scientists can test your DNA to find out which part of the world your ancestors were from. Your family's history may be a mystery to you, but there's a way to find out about it. It's called genealogy, and it's the study of the people you are related to. Genealogy helps you put together your family history. It starts with the relatives you know, such as parents and grandparents, and then you can learn about ancestors who lived and died before you were born.

It isn't difficult to learn about your past. You can begin by asking your relatives questions about your ancestors. While you are talking with family members, take notes. This helps you organize any information you get. Make sure you write down any names, dates or places people mention. Then you can draw a family tree with your relatives' name first and then put your name under all of them in a suitable way. Then you would add all the relatives from you to your great grandparents so you can see how everyone is related.

Question 1: What is the main idea of the passage?

A. Genealogy development in the future

B. Ways to identify your biological parents

C. A closer look to your family via genealogy

D. How to draw the family tree

Question 2: What is DNA responsible for according to the text?
