

## LISTEN AND COMPLETE

A galaxy is a large group of \_\_\_\_\_ (1), gas, and dust held together by gravity. One well-known galaxy is the Milky Way, which contains over \_\_\_\_\_ (2) stars. The most important star for us in the Milky Way is the \_\_\_\_\_ (3), because it gives us light and energy.

The \_\_\_\_\_ (4) name for the Milky Way is Galaxias Kyklos, which means "milky circle." It is best visible in the sky during the summer months, especially in \_\_\_\_\_ (5) and \_\_\_\_\_ (6), when the night is clear. In ancient times, people believed the Milky Way was milk spilled by the gods or a path to the heavens.
