

Section 4

(1) Today I'm going to talk about four of them: collaboration, hard work, creativity and excellence. Most people would say they're all 'good things'. I'm going to suggest that's an over-simple view.

The trouble with these values is that they're theoretical concepts, removed from the reality of day-to-day business. (2)

what may happen as a result. they can actually cause damage, which is not at all the intention.

Business leaders generally try to do the right thing. But all too often the right thing backfires, if those leaders (3) that arise. The values can easily get in the way of what's actually intended.

OK. So the first value I'm going to discuss is collaboration. Er, let me give you an example. On a management training course I once attended, we were put into groups and

(4) using building blocks that we were given. The rule was that everyone in the team had to move at least one building block during the construction. This was intended to encourage teamwork.

But it was really a job best done by one person. The other teams tried to (5) with everyone getting in each other's way. Our team leader solved the challenge brilliantly. She simply asked everyone in the team to move a piece a few centimetres, to comply with the rule, and then let the person in the team with an aptitude for puzzles like this build it alone. We finished before any other team. My point is that the task wasn't really suited to teamworking, so why make it one?

Teamwork can also (6) In the case of a smartphone that a certain company launched, one director wanted to target the

business market, and another demanded it was aimed at consumers. The company wanted both directors to be involved, so gave the product a consumer-friendly name, but marketed it to companies. (7)

It would have been better to let one director or the other have his way, not both.

Now industriousness, or hard work. It's easy to mock people who say they work hard: after all, a hamster running around in a wheel is working hard - and getting nowhere.

Of course (8) Otherwise it wastes the resources that companies value most - time and energy. And that's bad for the organisation.

There's a management model that groups people according to four criteria: clever, hardworking, stupid and lazy. Here 'lazy' means having a (9) It doesn't mean trying to avoid work altogether. Most people display two of these characteristics, and the most valuable people are those who are both clever and lazy:

they possess intellectual clarity, and they don't rush into making decisions. They (10) spent by the stupid and hard-working group. Instead of throwing more man-hours at a problem, the clever and lazy group looks for a more effective solution.

Next we come to creativity. This often works well – (11), for example, might lead to increased sales. But it isn't always a good thing.

Some advertising campaigns are remembered for their creativity, without having any effect on sales. This happened a few years ago with the launch of a chocolate bar: subsequent research showed that plenty of consumers remembered the adverts, but had no idea what was being advertised. The trouble is that the (12), and wrongly assumes the audience for the campaign will share that feeling.

(13)may seem more creative than a company that only has a few, but it may be too creative, and make smaller profits. Creativity needs to be targeted to solve a problem that the company has identified. Just coming up with more and more novel products isn't necessarily a good thing.

And finally, excellence. We all know companies that claim they 'strive for excellence', but it takes a long time to achieve excellence. In business, (14) than having the best product. A major study of company performance compared pioneers - that is, companies bringing out the first version of a particular product - with followers, the companies that copied and improved on that product. The study found that (15), while the followers achieved less than half that, only 13 percent - even though their product might have been better.

Insisting on excellence in everything we do is time-consuming, wastes energy and (16) Sometimes, second-rate work is more worthwhile than excellence. 'Make sure it's excellent' sounds like a good approach to business, but the 'just-get-started' approach is likely to be more successful.
