3- **FOOD AND COOKING**

Look at the menus and describe the orders. Then choose one and write down the utensils you need to cook the things on that menu

Kitchen stuff

9- **READING**

Read this article and solve the tasks

The hidden dangers of rock music

Twenty-two years ago as I left the house to go to see Motörhead – known at the time as ‘the loudest band in the world’ – my mother’s words followed me out of the door: ‘You’ll ruin your hearing one day!’ At the time, I rolled my eyes dramatically, and proceeded to assault my ears with 140 decibels of noise, which I now know is ten decibels above the sound of a jet plane taking off. That night, I left the venue with my ears ringing and it took more than a week for the ringing to diminish. But after that, I thought no more of it.

That is, until I was in my mid-20s. I was working in a busy store with background noise from shoppers and music, and I started finding it difficult to hear what customers were saying. At home, my husband began to notice that I was either mishearing or not hearing things at all. On one occasion when we were at a noisy party I had no idea what someone was saying to me, but I was nodding and smiling as if I understood. Afterwards, my husband informed me that the person had been telling me that her dog had just died. Needless to say, I was extremely embarrassed. The result of this episode was that I went to see my GP to have my hearing checked.

The news was not good. I had hearing loss of 50 per cent. It affected the top range of my hearing, which meant that any high-pitched noises, speech, phones, and day-to-day sounds were gone. I also had tinnitus, which was causing an infuriating ringing in my ears. The doctors explained that years of listening to loud music had caused the tiny sensory hair cells in the inner ear to become irreversibly flattened – meaning I would never hear properly again. And unless I protected my ears, my hearing would deteriorate even more.

So it turns out that my mother was right and I have, indeed, ruined my hearing. Today, I wear a pair of hearing aids that are quite discreet but still definitely very uncool. But according to the World Health Organization, I am not alone. They say that around four million Britons risk serious damage to their ears by exposure to loud music. Hours spent listening to music on MP3 players and at concerts are to blame.

There are so many things that can be done to protect our hearing and it is often a case of ‘it’ll never happen to me’ or thinking that ‘only old people go deaf’. However, in our modern life, where most people spend half their time plugged into a music device, it is very likely that it may, indeed, happen to you.

Answer the questions

1- What danger does the article refer to?

2- Who is affected by the problem?

Mark True or False

1- The writer’s mother didn’t want her to go to the concert **T - F**

2-The music at the concert was louder than the sound of a jet plane taking off **T - F**

3-After the concert, the writer had no symptoms of hearing damage **T - F**

4-The writer had problems with her hearing at work, but not at home. **T - F**

5-The writer pretended that she could hear what a person at the party was saying **T - F**

6-Despite her problems, the writer can still hear sounds at the bottom range of the scale **T - F**

7-Doctors told her she would eventually recover **T - F**

- ***Write down as many used ingredients as you can.***
- ***What utensils are used for this recipe?***
- ***What are the cooking methods you can see?***
- ***What proteins would you add to this recipe? (mention at least 2)***
- ***Why does the cheff say it is even better if the food is steamed?***
