Exercise 3. Read and do the task.

It's **incredible** to think that people haven't even been using the Internet for 30 years. When the Internet was first used, you had to **connect** through a telephone line and it could be very slow. Things have changed a lot since then. Today nearly four billion people have a mobile gadget, such as a smartphone, or a tablet or both. And with Wi-fi in many **public spaces**, it's easier than ever to connect.

Many agree that **mobile gadgets** and the apps on them are useful. They make our lives so much easier. We can do things like **search for** a word in the dictionary or use a torch with just the swipe of a finger. At any time and place, we can send and receive e-mails, play games or **look up** information. We can also share photos and videos or chat with friends and family using mobile technology. Smartphones have made it possible to send texts. By 2015, people were sending eight trillion texts per year. It's now the most popular way to **communicate**.

Because it's so useful, people spend a lot of time on the Internet. **Probably** too much time! In fact, the average person is online for almost four and a half hours each day. We connect to the Internet with a smartphone more than any other **devices**. Some people worry that we spend too much time with our gadgets. What about you? Do you spend too much time on the Internet?

Read and write the words from the box into the blanks.

device	connect	incredible	probably
public spaces	communicate	look up	

_ _ _ _ _ _ _ _ _ _ _ _   1. It is to share or exchange information, feelings, etc.
